

DUNNA NITIN

LinkedIn: [linkedin.com/in/nitinnr0306](https://www.linkedin.com/in/nitinnr0306)

GitHub: github.com/Nitinnr0306

Email: nitinnr0306@gmail.com

Mobile: +91-6304454756

Skills

Programming Languages:

Java, C++, C, JavaScript

Backend:

Spring Boot, Spring MVC, Spring Security, REST APIs, JPA/Hibernate

Frontend:

React, Next.js, TypeScript, HTML, CSS, Tailwind CSS

Databases & Caching:

PostgreSQL, MySQL, Redis

Testing & API Documentation:

JUnit 5, Mockito, Swagger/OpenAPI

Tools & DevOps:

Git, GitHub, Maven, Postman, Docker, Jenkins, Kubernetes, Terraform, AWS EC2, Render, Prometheus, Grafana, Flyway

Core Competencies:

Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems

Soft Skills:

Team Collaboration, Time Management, Adaptability

Projects

MedVision AI | AI-Powered Medical Imaging & Document Intelligence Platform | [GitHub](#)

April 2026 – Present

- Architected a **3-service microservices platform** (Next.js, Spring Boot, Python FastAPI) with **10 selectable CV operations** and a **unidirectional pipeline**, containerized with Docker and integrated with Jenkins CI/CD for automated testing and deployment.
- Developed **6 specialized medical CV modules** including Prescription OCR, X-Ray CLAHE Enhancement, and Scan Quality Detection, achieving **40% higher OCR accuracy** on phone captured prescriptions vs raw Tesseract baseline.
- Designed a Laplacian variance quality gate scoring scans across blur, brightness, and noise dimensions, auto-flagging unusable uploads before OCR pipelines run and reducing wasted processing by 60%.
- Established a Spring Boot validation layer with UUID-based file storage, 5-file cap, 10MB per-file limit, and MIME-type allowlist, exposing 8 REST endpoints consumed by a fully TypeScript-typed Next.js frontend; used Kubernetes/Terraform and Prometheus/Grafana for orchestration, infrastructure, and monitoring.
- Tech Stack:** Next.js 14 + TypeScript, Spring Boot 3 + Java 17, Python FastAPI, OpenCV 4.9, Tesseract OCR, scikit-image, NumPy, Lombok

Managio | SaaS Business Management Platform | [GitHub](#)

January 2026 – March 2026

- Designed a **multi-tenant SaaS platform** using **Spring Boot 3.3**, delivering **95 REST APIs**, **14 controllers**, and **8 business modules** across a **23K+ LOC** codebase.
- Secured **granular RBAC** with **6 staff roles**, **30 permission controls**, **JWT access/refresh authentication**, token rotation, rate limiting, and automated account lockout after failed login attempts.
- Automated **subscription workflows** with scheduled expiry handling, **3-stage reminder workflows**, and bulk CSV import/export for membership management.
- Validated backend business logic using **JUnit 5** and **Mockito**, with **Swagger/OpenAPI** documentation for REST APIs and standardized validation and exception handling.
- Tech Stack:** Java 21, Spring Boot 3.3, Spring Security, PostgreSQL, Redis, Docker, JWT, Flyway, JPA/Hibernate, JUnit 5, Mockito, Swagger/OpenAPI

Dice Tournament | Core Java Console Application | [GitHub](#)

January 2025 – March 2025

- Created a **pure Java dice tournament application** supporting player management, configurable dice and rounds, match execution, tie handling, leaderboards, and player statistics.
- Leveraged **Streams, Lambdas, Comparators, and Collections** to generate sorted leaderboards and reports containing aggregate statistics, totals, and averages.
- Integrated **Builder and Repository design patterns**, custom exception handling, input validation, and SRP-based service separation to improve modularity and maintainability.
- Persisted player data using Java serialization and organized the application into dedicated **model, repository, service, report, and validation layers** for modular execution and maintainability.
- Tech Stack:** Java, OOP, Collections, Generics, Streams, Lambdas, Exception Handling, File I/O, Serialization, Design Patterns

Certificates

Data Structures and Algorithm – [CipherSchools](#)

July 2025

Introduction to Hardware & Operating Systems – [Coursera](#)

September 2024

Achievements

- Solved **150+ problems on LeetCode**, covering core Data Structures and Algorithms patterns. Aug 2026
- Secured a **3-Star rating in Problem Solving on HackerRank**, demonstrating strong programming and algorithmic problem-solving fundamentals. March 2024

Education

Lovely Professional University

Bachelor of Technology - Computer Science and Engineering — **CGPA: 7.47**

Punjab, India

August 2023 – Present

Gayatri Junior College

Intermediate; **Percentage: 81.5%**

Srikakulam, Andhra Pradesh

April 2021 – March 2023

Bhashyam High School

Matriculation; **Percentage: 99%**

Palasa, Andhra Pradesh

April 2020 - March 2021
